

MOHAMMED EL-SAEED

Senior Backend Engineer | PHP, Laravel & Symfony | 7+ Years

Cairo, Egypt | +20 112 477 2675 | mohammedelsaeed4444@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Senior Backend Engineer with 7+ years of experience building and modernizing secure, scalable platforms across e-commerce, fintech, healthcare, and SaaS. Experienced in owning backend delivery, defining architecture and engineering standards, resolving complex production issues, and improving database and API performance. Trusted to lead business-critical initiatives, coordinate with product and cross-functional teams, and guide developers through design and implementation decisions. Experienced in remote collaboration with international teams, including a long-term engagement with a German software company.

PROFESSIONAL EXPERIENCE

Senior Software Engineer — QiCards | Aug 2024 – Present

Hybrid | Egypt / Iraq

- Owned end-to-end backend delivery for Miswag, a large Iraqi e-commerce platform, including technical planning, architecture decisions, implementation, release support, and production stability.
- Acted as the primary technical point of contact, translating business requirements into technical work and coordinating with frontend, mobile, QA, product, and other engineering teams.
- Evaluated alternative designs and architecture approaches, selected suitable patterns, and defined the technical requirements needed to keep the platform maintainable and scalable.
- Handled urgent and complex production issues, led root-cause analysis, and proposed immediate mitigations and long-term fixes to reduce recurrence.
- Improved critical endpoint performance by profiling slow queries, rewriting heavy Eloquent logic, and applying targeted compound indexes for high-volume transaction flows.
- Guided other developers through implementation decisions, code discussions, and troubleshooting of difficult backend problems.

Senior Backend Developer — ACID21 GmbH | Feb 2023 – Jun 2024

Remote | Germany

- Established the initial Symfony structure, module boundaries, coding conventions, and shared backend foundation for Evi.Plus, which was later adopted and extended by the wider engineering team.
- Reduced a critical API response time from approximately 2–3 minutes to about 300 ms through query profiling, database optimization, refactoring, and more efficient data-loading strategies.
- Worked directly with company management and stakeholders to clarify requirements, explain technical trade-offs, and recommend practical solutions aligned with business priorities.
- Led backend architecture for WPDT, an automotive parts inventory and catalog platform with complex search and filtering requirements.
- Modernized legacy PHP modules to PHP 8 and improved code organization, reducing recurring defects and making future development easier for the team.

Software Engineer — Dlivr.io (NFQ Group) | Jul 2022 – Dec 2022

Hybrid | Egypt / Vietnam / Germany

- Developed the core financial calculation engine for payroll, salary, tax, and social-insurance processing with a strong focus on accuracy and maintainability.
- Built secure API integrations with banking and government tax services, automating major steps of the payroll workflow.
- Collaborated with distributed product and engineering teams to clarify calculation rules, validate edge cases, and deliver stable backend features.

Senior Backend Developer — MediaPanArab | Jun 2021 – Jun 2022

Egypt

- Entrusted to redesign and stabilize So3ody Sport, a technically challenging and business-critical product that represented a major source of company revenue.
- Owned the backend redesign from problem analysis and architecture selection through implementation and rollout while protecting continuity of the live platform.
- Delivered a maintainable platform that became a dependable core product and supported heavy traffic during live sports events.
- Used MongoDB and Redis caching to improve scalability under traffic spikes, and optimized API responses and backend rendering to support Core Web Vitals and SEO performance.
- Helped engineers choose suitable design patterns and implementation approaches and contributed to technical decisions beyond assigned development tasks.

Backend Developer — TeraNinja | Aug 2020 – Jun 2021

Egypt

- Designed and implemented WebSocket-based real-time communication for DoctorFamily, replacing an inefficient patient-doctor polling flow with a lower-latency solution.
- Built MeatVillage, a secure multi-tenant agriculture e-commerce backend using isolated database architecture to maintain strict data separation between tenants.
- Contributed to architecture and design-pattern decisions, supported teammates on difficult technical issues, and coordinated API behavior with frontend and mobile developers.

Backend Developer — Mideast Soft | Dec 2018 – Jun 2020

Egypt

- Delivered Envento, a modular multi-tenant event-management platform with database-level isolation and role-based access control for multiple clients.
- Investigated API latency bottlenecks and improved performance through Eloquent query optimization, relationship-loading improvements, and strategic database indexing.
- Collaborated with frontend engineers to define clear API contracts and deliver event-tracking and dashboard capabilities on schedule.
- Supported team members with technical problem-solving and contributed to selecting maintainable backend structures and reusable implementation patterns.

TECHNICAL SKILLS

Backend: PHP 7/8, Laravel, Symfony, Livewire, Filament, Doctrine ORM

Databases & Performance: MySQL, MongoDB, Redis, Eloquent/Doctrine optimization, indexing, caching, queues

Architecture: REST APIs, multi-tenant systems, modular design, SOLID, design patterns, microservices

Delivery & Quality: Docker, Git/GitHub/GitLab, CI/CD, PHPUnit, Postman, Agile/Scrum, Linux

Technical Leadership: Solution design, architecture decisions, code reviews, mentoring, incident resolution, cross-team coordination

EDUCATION & TRAINING

BSc in Computer Science — Benha University | 2013–2017 | Graduation Project: Sentiment Analysis Mobile Application — Excellent

ITI — Open Source Track | Excellent • AMIT — PHP Web Development Diploma | Excellent
